Project Name: Drvr

Abstract

Drvr *(pronounced 'driver')* is an application designed for Windows PCs to allow a user to be able to learn about cars. It has been imagined from the ground up to be a fun, easy to use tool to teach you in an interactive way about how a car works and the various parts of the car. It even has a self quiz section to allow you to test your understanding in a fun and engaging way.

Drvr has been designed to appeal to both new drivers and existing drivers who would like to improve their knowledge about cars, as we did realise there is a market from people who already have some knowledge on cars, but would like to know more about cars.

Go ahead, put yourself back in the driver's seat in your car.
